<td><strong>MiraFlex II - System X and MiraStamp</strong> must be applied to a clean, sound, and mechanically prepared concrete substrate, as per ICRI’s Tech Guide No.03732, “Selecting and Specifying Concrete Surface Preparation”.</td>
<td>N/A</td>
</tr>
</tbody>
</table>
| 2      | Prime Concrete with MiraFlex Membrane A       | a. Dip and Roll      | **Blend:** MiraFlex Membrane A and Potable Water  
**Mix Ratio:** MiraFlex Membrane A:Water = 1:1  
**Note:** Minimum (CSP) concrete surface profile of CSP-4 or higher is required depending on existing substrate conditions & overlayment requirements.                                                                                           | 400 SF/Gal                  |
|        |                                               |                      | 4 mils WFT  
1 mil DFT  
**Note:** MiraFlex Membrane A must be dry, clean and free of surface contaminants that may effect adhesion.                                                                                                                                                                                                                       |                              |
| 3      | Apply 1st Coat of MiraFlex Membrane A         | a. Notched Squeegee/Trowel  
and Lightly Backroll  
b. Dip and Roll | **MiraFlex Membrane A Neat**  
(Single Component)  
**Note 1:** During application of MiraFlex Membrane A, the use of a mil gauge is necessary to verify correct WFT.  
**Note 2:** When the 1st Coat of MiraFlex Membrane A is dry to the touch, apply the 2nd coat within 24 hours.                                                                                                           | 64 SF/Gal                  |
|        |                                               |                      | 25 mils WFT  
12.5 mils DFT  
**Note:** Exercise caution before proceeding to Step #4. MiraFlex Membrane A must be dry, clean and free of surface contaminants that may effect adhesion.                                                                                                                                                       |                              |
| 4      | Apply 2nd Coat of MiraFlex Membrane A         | a. Notched Squeegee/Trowel  
and Lightly Backroll  
b. Dip and Roll | **MiraFlex Membrane A Neat**  
(Single Component)  
**Note 1:** Apply the second membrane coat @ right angles to the first membrane coat.  
**Note 2:** Exercise caution before proceeding to Step #4. MiraFlex Membrane A must be dry, clean and free of surface contaminants that may effect adhesion.                                                                                                           | 64 SF/Gal                  |
|        |                                               |                      | 25 mils WFT  
12.5 mils DFT  
**Note:** Exercise caution before proceeding to Step #4. MiraFlex Membrane A must be dry, clean and free of surface contaminants that may effect adhesion.                                                                                                                                                       |                              |
| 5      | Apply Miracote MPC Slurry Coat                | a. Hand Trowel or  
b. Magic trowel or  
c. Squeegee or  
d. Broom or | **Blend:** Miracote MPC Liquid Catalyst and Miracote MPC Powder  
**Mix Ratio:** 5 Gal Miracote MPC Liquid Catalyst to (2) 55 LB Bags  
**Note:** Climatic conditions that are associated with high rates of evaporation can decrease Miracote MPC working time. Add 1 unit of Miracote Retarder to increase valuable working time.                                                                                   | 500 SF/Unit                 |
| 6      | Install MiraStamp Overlay                    | a. Gauge Rake and  
b. Fresno trowel  
c. Hand-trowel in tight areas | **Blend:** ColorPax LIP + MiraStamp Liquid + MiraStamp Powder  
**Mix Ratio:** (1) ColorPax LIP Container to  
(1) 5 Gal Pail MiraStamp Liquid to  
(5) 45 LB Bags MiraStamp Powder  
**Yield:** 1.85 CF/Unit  
**Note:** ColorPax-LIP (Liquid Integral Pigment) packs must be dispensed and mixed into the 5 Gal pail of MiraStamp Liquid.                                                                                                                                         | 89.0 SF @ 1/4”  
67.0 SF @ 3/8”  
44.5 SF @ 1/2”  
33.4 SF @ 5/8” |
## Installation Guideline

### MiraFlex II - System X for Concrete Substrates

**Choose any of the Miracote sealers or topcoats for best results depending on location, service, use and exposure. Refer to the Product Technical Data Sheets and Installation Guides for MiraGard HDWB, MiraGard HD 400, MiraGard HD 100 or MiraThane WB.**

**Note:** Prior to starting the application of any Miracote Product or System be sure to read the Installation Guide(s), Product Data Sheets, MSDS and other pertinent documents published by Crossfield Product Corp. for information, including but not limited to, Precautions, Limitations, Disclaimers and Warranties.

Pay special attention to substrate moisture content, physical condition of the substrate, method(s) of surface preparation, surface restoration, detailing of cracks, joints, transitions and terminations, and any applicable specifications. Review carefully for unknown site conditions or defects.

The theoretical coverage rates stated in the Installation Guides are for estimating purposes only. Factors, such as, allowance for material waste, unusual or abnormal substrate conditions and other unforeseen job site conditions that may affect actual product yields are the responsibility of the installer.
