

### **Installation Guideline**

# Pool Structures Tile Line Only Installation

Step#	Installation Step	Installation Methods	Products & Mix Ratios	Theoretical Coverage Rates			
	Concrete Surface Preparation and Primary Waterproofing						
1	Prepare Concrete Substrate  Note 1: Typically, gunite and shotcrete pool shells have a natural rough concrete surface profile (CSP) due to these types of concrete installation methods.	A. Pressure washing     b. Other similar and approved     c. Vacuums and/or blowers	New Concrete: When concrete has sufficiently hardened enough to walk on without causing damage, pressure wash the substrate to remove laitance, dust, debris, form release agents, and any other pore blocking substances that may potentially inhibit penetration of the primary waterproofing application. On new gunite/shotcrete concret the use of vacuums or blowers to evacuate dust and debris is an acceptable method. Pre-existing Concrete: Primary (integral) waterproofing must be applied to a clean	e N/A			
	Note 2: For all other concrete pool shells a minimum (CSP) concrete surface profile of CSP-3 or higher is required depending on existing concrete conditions.		and sound substrate with an open-pore structure. Mechanically prepare surfaces as required per ICRI Technical Guideline No. 310.2R-2013, "Selecting and Specifying Concrete Surface Preparation"				
	Apply MiraPrime Aqua-Blok XL Integral Waterproofing	a. Low pressure pump sprayer     (with fan tip)     b. Rollers and/or brushes	MiraPrime Aqua-Blok XL Single component	150 - 200 SF/GAL/Application			
2	<b>Note:</b> Two applications are always required and applied	(for detail work)		*Actual consumption rate is dependent on concrete water/cement ratio, surface texture and porosity.			
	within 30 to 45 minutes apart followed by two mist coats of potable water applied in the same manner.		Note: For further instructions, refer to the most current individual Product Technical Data Sheet (PTDS) and Installation Guide (IG) for MiraPrime Aqua-Blok XL	Note: Avoid over-application and puddling.			
	Apply Miracote Mortar Bed 2000	a. Hand Trowel or	Miracote Mortar Bed 2000	Yield: .48 CF/Unit			
	Note 1: Brown coat pool shell surfaces as required & to establish mortar bed for tile lines.	b. Screed	Mix Ratio: (1) 50 LB Bag to 3 Quarts Potable Water	Covers: 46.6 SF @ 1/8" 23.3 SF @ 1/4"			
	<b>Note 2:</b> Sand and cement renders & mortar bed mixes are acceptable with the use of Miracote Polymer Admix.		<b>Note:</b> For further instructions, <b>r</b> efer to the most current individual Product Technical Data Sheet (PTDS) and Installation Guide (IG) for Mortar Bed 2000.				
		Detailing of Char	nges-in-Plane, Penetrations, Cracks and Cold Joints				
3a	Cracks and Cold Joints - Less than 1/16"  Apply Detail Coat MiraFlex Membrane C  Reinforced with Poly Fabric	a. Medium Nap Roller b. Brush c. Trowel	Blend: MiraFlex Membrane C Liquid and MiraFlex Membrane C Powder  Mix Ratio: MiraFlex Membrane C Liquid - (1) 2 Gal.Pail  MiraFlex Membrane C Powder - (1) 43 lb bag  = 1 Unit	140 lineal feet per Unit			
Ju	Cracks and Cold Joints - 1/16" and Greater		Refer to MiraFlex Membrane C Crack Treatment Detail MIR-MEMC-CT1 (4/12/20)	The infoat look per Office			
	4a.1 - Rout & Seal with CPC Hybrid Sealant 4a.2 - Apply Detail Coat of MiraFlex Membrane C Reinforced with Poly Fabric						
	Inside and Outside Corner Changes-in-Plane and Penetrations	a. Medium Nap Roller b. Brush c. Trowel	Blend: MiraFlex Membrane C Liquid and MiraFlex Membrane C Powder  Mix Ratio: MiraFlex Membrane C Liquid - (1) 2 Gal.Pail  MiraFlex Membrane C Powder - (1) 43 lb bag				
3b	4b.1 - Seal with CPC Hybrid Sealant 4b.2 - Apply Detail Coat of MiraFlex Membrane C Reinforced with Poly Fabric		= 1 Unit  Refer to MiraFlex Membrane C Change-in-Plane Detail	100 lineal feet per Unit			
	Note 1: Inside corners only require sealant when cold or construction joints are present. Outside corners only require Membrane C and fabric (no sealant needed).		MIR-MEMC-CPD1 (4/12/20)  Refer to MiraFlex Membrane C Pipe Penetration Detail  MIR-MEMC-PD1 (4/12/20)				

#### Installation Guideline

## Pool Structures Tile Line Only Installation

Step#	Installation Step	Installation Methods	Products & Mix Ratios	Theoretical Coverage Rates			
Flexible Waterproofing Membrane Application							
	Apply MiraFlex Membrane C	a. Trowel or	Blend: MiraFlex Membrane C Liquid and MiraFlex Membrane C Powder				
	Waterproofing Membrane	b. Squeegee or	Mix Ratio: MiraFlex Membrane C Liquid - (1) 2 Gal.Pail				
	First Coat	c. Dip-N-Roll	MiraFlex Membrane C Powder - (1) 43 lb bag	Yield: 160 sq. ft/Unit/Per Coat			
5a		d. Texture gun	= 1 Unit	Application Thickness: 30 mils WFT (1/32")			
	Note: Two separate coats are always required.	e. Air-assisted spray					
	Predampen concrete substrate prior to applying 1st coat.		Note: For further instructions, refer to the most current individual Product				
	Apply the 2nd coat when surface appears evenly dry.		Technical Data Sheet (PTDS) and Installation Guide (IG) for MiraFlex Membrane C.				
	Apply MiraFlex Membrane C	a. Trowel or	Blend: MiraFlex Membrane C Liquid and MiraFlex Membrane C Powder				
	Waterproofing Membrane	b. Squeegee or	Mix Ratio: MiraFlex Membrane C Liquid - (1) 2 Gal.Pail				
	Second Coat	c. Dip-N-Roll	MiraFlex Membrane C Powder - (1) 43 lb bag	Yield: 160 sq. ft/Unit/Per Coat			
5b		d. Texture gun	= 1 Unit	Application Thickness: 30 mils WFT (1/32")			
		e. Air-assisted spray					
	Note: Apply 2nd coat at right angles to the 1st coat.						
	Finish and smooth tile line surface with a trowel.						
For Application of Tile Line - Proceed with Tile Installation as per Applicable TCNA Guidelines							
For Application of Plaster - Proceed with Bondcoat Application							
	Mix and Apply Miracote BC Pro	a. Loop Roller or	Blend: Miracote BC Pro Powder and Water				
	Bond Coat for Plaster	b. Hopper Gun and backroll or	Mix Ratio: 5-7 Qts. Potable Water to (1) 55 LB Bag				
		c. 1" - 1 1/2" nap roller		Loop Roller 120 -140 SF/Unit			
6a		•	Mix thoroughly for approximatey 3 minutes with drill & paddle and allow to				
			dwell for 2 minutes before application.	Hopper Gun 120 -140 SF/Unit			
	Note: Proceed with the application of Miracote BC Pro						
	within 24 to 72 hours of the completion of the MiraFlex		Note: For further instructions, refer to the most current individual Product				
	Membrane C application.		Technical Data Sheet (PTDS) and Installation Guide (IG) for Miracote BC Pro.				
Proceed with Application of Plaster Finish							

#### Proceed with Application of Plaster Finish

Prior to starting the application of any Miracote Product or System be sure to refer to Installation Guide(s), Detailed Drawings, Product Data Sheets, MSDS and any other pertinent documents published by Crossfield Product Corp. for information, including but not limited to, Precautions, Limitations, Disclaimers and Warranties.

The theoretical coverage rates stated in the Installation Guides are for estimating purposes only. Factors, such as, allowance for material waste, unusual or abnormal substrate conditions and other unforeseen job site conditions that may affect actual product yields are the responsibility of the installer.
