

Miracote BC Pro

Ultimate Waterproofing and Bond Coat for Lasting Pool Plaster Protection.

Miracote BC Pro is a single component, polymer-modified, rigid cementitious coating that is mixed with potable water on site for use in a wide range of waterproofing and dampproofing functions. Once applied and properly cured, BC Pro will form a dense barrier against water ingress providing long term protection for concrete, masonry, and other porous substrates.

In addition to waterproofing functionality, Miracote BC Pro is a superior choice as a bond coat and adhesion promoter for pool plaster applications. Specially formulated to provide unparalleled performance in full submersion, BC Pro delivers superior mechanical and chemical bond between new pool plaster finishes over existing plaster, concrete and similar substrates. Miracote BC Pro is designed not only to enhance performance, but to save time and the cost of application by eliminating the need for excessive preparation work of existing pool substrates.

Advantages:

- Single component - Just add water.
- Available in white – easier to work with on hot days.
- Economy and performance in one package.
- Enhanced bonding capabilities.
- Vapor permeable – allows concrete to “breathe”.
- Freeze/thaw resistant.
- Suitable for use in negative side applications.
- Ideal bond coat between a cementitious waterproofing & plaster.
- Provides balanced hydration during plastering process.
- Eliminates excessive substrate preparation.
- Saves time and money in labor and equipment costs.
- Significantly reduces pool plaster delamination problems.
- Low VOC – Meets LEED Criteria.
- Can be integrally pigmented to match various plaster finishes.

Where to use:

- Pools & Spas
- Raised Bond Beams
- Fountains, ponds & water features
- Dams, reservoirs, spillways, and troughs.
- Tunnels, retaining walls, elevator pits and foundations.
- Water, wastewater, and secondary containment structures.
- Horizontal, vertical, above and below grade applications.
- Waterproofing protection for concrete, brick, and masonry.
- Filler for “bug holes” & parge coat for a smooth finish.

Miracote BC Pro2K

Flexible Bond Coat for Faster, Superior Pool Plaster Adhesion.

Miracote BC Pro2K is a two component, polymer-modified, flexible cementitious bond coat and adhesion promoter for new pool plaster and replastering applications. Specially formulated to provide unparalleled performance, BC Pro2K delivers superior mechanical and chemical bond between new pool plaster finishes over fresh concrete, existing plaster, and waterproofing membranes. BC Pro2K is designed not only to enhance performance, but to save time and the cost of application by providing a shorter window for the application of pool plaster.

Advantages:

- Two component – Apply plaster quicker than BC Pro.
- Available in white – easier to work with on hot days.
- Economy and performance.
- Enhanced bonding capabilities.
- Vapor permeable – allows concrete to “breathe”.
- Excellent freeze/thaw resistance.
- Suitable for use in positive and negative side applications.
- Ideal bond coat between a cementitious waterproofing & plaster.
- Provides balanced hydration during plastering process.
- Eliminates excessive substrate preparation.
- Saves time and money – compresses work schedule.
- Significantly reduces pool plaster delamination problems.
- Low VOC – Meets LEED Criteria.
- Can be pigmented to match various plaster finishes.

Where to use:

- Pools & Spas
- Raised Bond Beams
- Fountains, ponds & water features
- Dams, reservoirs, spillways and troughs.
- Tunnels, retaining walls, elevator pits and foundations.
- Water, wastewater, and secondary containment structures.
- Horizontal, vertical, above and below grade applications.
- Waterproofing protection for concrete, brick and masonry.
- Filler for “bug holes” & parge coat for a smoother finish.
